

AI Capstone Project Documentation

Project Title

AI-Powered Campus Assistant Chatbot

Problem Statement

Students often face difficulties in obtaining quick and accurate information regarding admissions, courses, timetables, library services, campus events, examination schedules, and contact details. They usually need to visit multiple departments or websites, which can be time-consuming and inconvenient. Therefore, there is a need for an intelligent system that provides instant and reliable information to students.

Project Objective

The objective of this project is to develop an AI-powered Campus Assistant Chatbot that can interact with students and provide immediate responses to campus-related queries. The chatbot aims to improve communication, reduce manual workload, and make educational information easily accessible anytime and anywhere.

Solution Description

The Campus Assistant Chatbot is a conversational AI application developed using Botpress. The chatbot assists students by answering frequently asked questions related to:

- Admission Information
- Course Details
- Class Timetable
- Library Services

The chatbot uses predefined conversation flows and AI-based interactions to understand user queries and provide relevant responses. It offers a user-friendly interface and ensures that students receive accurate information quickly.

Sustainable Development Goal (SDG):

SDG 4 – Quality Education

The project supports quality education by making academic information easily accessible to students.

Future Scope

Integration with college databases for real-time information.

Voice-enabled chatbot support.

Multi-language support for regional languages.

Mobile application integration.

Student login and personalized services.
